github.com/ishaan-jindal — linkedin.com/in/jindal-ishaan

Summary

Backend systems engineer with hands-on experience in containerized infrastructure, distributed systems, and full-stack development. Built production systems handling 200+ concurrent executions, shipped apps to Google Play Store and pub.dev, and scaled workflows using automation platforms. Strong foundation in API design, sandboxing, and cross-platform mobile development.

Education

VIT Chennai — B.Tech Computer Science and Engineering
CGPA: **8.77 / 10.0** *DevsHouse Hackathon — Top 10% (2026)*

Expected: **2028**

Work Experience

Intern — Dishman Carbogen Amcis Limited

June 2026

- Gained hands-on experience with the company's on-premise hosting infrastructure and deployment stack.
- Researched n8n for enterprise workflow automation, built sample integrations with SAP and OpenRouter AI, and compiled findings into a comprehensive evaluation report used as a reusable reference by the operations team.

Technical Skills

Languages: TypeScript, Dart, Go, C/C++

Backend: Node.js, Express.js, REST APIs, Gorilla WebSocket, Chi, n8n

Frontend/Mobile: Flutter, BLoC, Bubble Tea, Lip Gloss

Databases: PostgreSQL, MongoDB, Firebase

DevOps: Docker, GitHub Actions, Linux, Nginx, Redis, Prometheus, Oracle Cloud

Projects

Runnix — Sandboxed Code Execution Engine

TypeScript, Docker, gVisor, Redis, Prometheus github.com/ishaan-jindal/runnix

- Built JWT auth, API key management, and role-based access control with granular permission tiers.
- Implemented Docker + gVisor sandboxing with per-container resource limits (64MB memory, 0.5 core CPU) for secure code isolation.
- Designed Redis-backed rate limiting (10–500 req/min) and webhook delivery with retry logic, **sustaining 200+ concurrent jobs**.
- Deployed on Oracle Cloud with Prometheus observability for real-time runtime metrics and alerting.

termchat — Full-Stack Anonymous Chat Platform

Go, Gorilla WebSocket, Bubble Tea, Flutter, Docker github.com/ishaan-jindal/termchat

- Built Go WebSocket server with ephemeral rooms, host succession, and password protection; Bubble Tea terminal client.
- Developed Flutter mobile app with responsive Material UI and real-time room state; **published to Google Play Store** (closed testing), fully interoperable with terminal users via shared WebSocket protocol.
- Wrote widget and integration tests for Flutter client; GitHub Actions pipeline runs test suite and builds APK on merge.
- Published on AUR with GitHub Actions CI/CD for multi-platform binaries (Linux, macOS, Windows, Android).

SwiftWrite — Local-First Flutter Writing App

Flutter, Dart, BLoC, Hive, Firebase github.com/ishaan-jindal/SwiftWrite

- Architected offline-first state with BLoC + Hive; Firebase sync triggered only on authenticated sessions.
- Designed a feature-sliced widget hierarchy with reusable Material components; integrated Markdown preview with live rendering.
- Integrated authenticated code execution (Python, C) via REST API with sandboxed output display.

Steal-CSS — Automated CSS Extraction

Node.js, Puppeteer, MongoDB, Docker github.com/ishaan-jindal/steal-css

- Render, extract, and index website stylesheets **in sub-200ms latency**.
- Orchestrated browser workflows via Puppeteer; containerized for reproducible multi-site deployments.

motion_counter — Animated Number Ticker Widget

Flutter, Dart, Animations pub.dev/packages/motion_counter

- **Published Dart package on pub.dev** with 100+ downloads; exposes a drop-in animated number ticker using Flutter's animation framework.
- Designed a flexible public API with configurable duration, curve, and style; zero external dependencies.

Leadership

Android Club, VIT Chennai — Technical Head

2026–Present

- Technical decisions for 100+ member club; establishing stack standards, code review processes, and mentoring junior developers.

Languages

Hindi (Native), English (Fluent), German (Beginner)
